

Great Plains Pipe Testing Expands Service Area

Great Plains Pipe Testing, LLC, of Parsons, Kansas, has recently expanded to Oberlin, Kansas to meet the pipe testing needs of the Northwest Kansas and Southwest Nebraska oil and gas fields. Their specialty is rack and down-hole hydrostatic testing of both tubing and casing. In addition, the firm can drift the tubing while it is being tested to confirm the absence of crimps or any other restrictions that may jeopardize the integrity of the tubing.

Unique to the Oberlin area is Great Plains ability to test tubing down-hole. This process is performed as tubing is run into the wellbore to ensure the integrity of the tubing and connections. Furthermore, testing below ground surface increases the safety of the testing process. In order to increase production and reduce downtime due to failures, it is important to regularly test the tubing.

If you would like to schedule a hydrostatic pressure test, obtain an estimate of Great Plains Pipe Testing Services, or receive answers to questions, call either 620-605-8378 (TEST) or 620-423-5017. You may also contact them via email at greatplainspipetesting@gmail.com. **Peggy Brecheisen** is owner and **Mark Brecheisen** is unit operator.
